DETAILED ACTION

1. Claims 1 to 34 are presented for examination.

Information Disclosure Statement

2. The references listed in the information disclosure statement submitted on 9-30-2004, 1-5-2005 & 7-11-2005 have been considered by the examiner (see attached PTO-1449).

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claim 12 is provisionally rejected on the ground of nonstatutory obviousness-type

double patenting as being unpatentable over claim 1 of copending Application No. 10/668,526. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of USPA No. 10/668,526 contains every element of claim 12 of the instant application and as such anticipates claim 12 of the instant application.

"A later patent claim is not patentably distinct from an earlier patent claim if the later claim is obvious over, or **anticipated by**, the earlier claim. In re Longi, 759 F.2d at 896, 225 USPQ at 651 (affirming a holding of obviousness-type double patenting because the claims at issue were obvious over claims in four prior art patents); In re Berg, 140 F.3d at 1437, 46 USPQ2d at 1233 (Fed. Cir. 1998) (affirming a holding of obviousness-type double patenting where a patent application claim to a genus is anticipated by a patent claim to a species within that genus). " **ELI LILLY AND COMPANY v BARR LABORATORIES, INC.**, United States Court of Appeals for the Federal Circuit, ON PETITION FOR REHEARING EN BANC (DECIDED: May 30, 2001).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

5. Claims 13 to 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 1 to 11 and 24 to 34 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art made of record teaches various decoders for decoding for low density parity check (LDPC) codes using symbol nodes, check nodes, updating the symbol nodes, check nodes and the LLR values. For instance, Yu-Hu (*Efficient implementations of the sum-product algorithm for decoding LDPC codes*, IEEE) discloses a system for updating the check nodes and the symbol nodes using the LLR values. Chen et al. (*Reduced-complexity decoding of LDPC codes*, IEEE) discloses decoding the LDPC codes using the bipartite graph and LLR values according to a belief-propagation (BP).

However, the prior art made of record taken alone or in combination fails to teach or fairly suggest or render obvious the novel element of the instant invention. Specifically, the prior art made of record, fails to teach or fairly suggest the limitation of "during a last iterative decoding iteration, making a best estimate for the symbol using that symbol's most recent corresponding plurality of possible soft symbol estimates; and making bit estimates based on the best estimate for the symbol such that the bit estimates are hard decisions for each of the individual bits of the symbol."

Conclusion

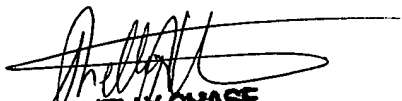

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
